ACKNOWLEDGMENTS

This list was made possible largely through funding by the U.S. Department of Energy to the University of Illinois under contract number EY-76-05-5203 and by the U.S. Energy Research and Development Administration under contract number E-(40-1)-5203.

Lindell H. Van Dyke, Jay Hoeflinger, and other members of the Computer Services staff of the Illinois State Geological Survey directed the encoding, programming, and printing of the file. James A. Noel designed the original computer coding format for the file.

Catalog of Devonian and deeper tests in central Illinois

David L. Stevenson
John N. Keys
Robert M. Cluff

ABSTRACT

A computer-produced list of approximately 12,900 Devonian and deeper tests in Illinois has been compiled from the records of the Illinois State Geological Survey (ISGS). This volume includes 7,101 oil and gas tests in central Illinois; water wells are excluded. The list includes: well name, location, elevation, total depth, age of the deepest formation penetrated, ISGS sample set number, date drilled, and the availability of geophysical logs. This listing will facilitate the acquisition of deep subsurface data for petroleum exploration and other basic geologic research.

INTRODUCTION

More than twenty years ago the Oil and Gas Section of the Illinois State Geological Survey began to keep a separate set of records for tests drilled through the base of the New Albany Shale Group (Middle Devonian-Kinderhookian). These records became known as the "Devonian and deeper file." The data in the records range from basic items such as well name, location, elevation, and total depth to detailed geologic information such as formation tops and partial sample studies. This file has been used a great deal both by Survey staff members and visitors to the Survey, because it expedites the acquisition of deep subsurface data in Illinois and reduces the need to search the complete drillhole file in the Survey's Geological Records Section.

In 1976, the Illinois State Geological Survey agreed to supply a computer-generated file of data on holes penetrating the New Albany Shale in

Illinois as part of the U.S. Department of Energy's (DOE) Eastern Gas Shales Project. The resulting computerized file was largely made possible through partial support from DOE. This publication was compiled from that file and provides a catalog of the locations of Devonian and deeper tests, with information on the availability of basic geological data for each test. We hope that this information will facilitate exploration for deep oil and gas in Illinois and for unconventional energy resources, such as gas in Devonian shales.

SCOPE OF REPORT

Approximately 12,900 Devonian and deeper tests in southern and central Illinois are included in the computerized file. Because of the large number of tests, we have divided the list into two volumes. This volume covers 41 counties in central Illinois, and 7,101 wells are listed; the companion volume, Illinois Petroleum 118, covers 41 counties of southern Illinois. Figures 1 and 2 are based on computer-produced maps showing the locations of all holes covered in this volume. Using these maps, the reader can easily see the density of Devonian drilling in any area.

Because new Devonian test holes are drilled regularly throughout Illinois, a list such as this becomes out of date immediately. Therefore, holes drilled and reported to the Survey after mid-1976 do not appear on the following list (an exact cut-off date in 1976 cannot be specified because many wells completed before a given date are not issued completion tickets for many weeks or even

months). It is likely that all Devonian tests drilled through 1975 as well as any tests drilled in early 1976 for which completion tickets were promptly issued are included.

No water wells are included in this file; however, the user should be aware that many of the deep bedrock water wells in central and western Illinois penetrate Devonian or deeper strata, and samples may be available from many of them. Geophysical logs, however, are seldom run in water wells. The northern boundary of the area covered by this file coincides with the subsurface erosional limit of the New Albany Shale (figs. 1 and 2). Because we believe the main use of this list will be to facilitate oil and gas exploration, the thousands of "Devonian and deeper" holes (most of them bedrock water wells) drilled north of this erosional limit are omitted from this list.

FILE DATA

The data contained in the computer file are listed below:

1. Unique well number, composed of state and county code and county number. Only county number is shown in this publication.
2. Company name, drill hole number, and farm name.
3. Legal location, including section, township, range, and location within section.
4. Elevation of logging reference.
5. Total depth.
6. Age of the deepest formation penetrated.
7. Illinois State Geological Survey sample set number.
8. Date drilled.
9. Availability of geophysical logs.

The holes are grouped by county and are arranged by location (section, township, range). Counties are listed alphabetically.

Figure 3 is a generalized columnar section of Salem (Mississippian) and deeper strata in central and southern Illinois. Only the geologic age of the deepest formation penetrated is shown in this

list. If the deepest formation penetrated had not been determined by a geologist, or if there was some question regarding the determination, the column was left blank. The reader is referred to Willman et al. (1975) for detailed information on the age of stratigraphic units in Illinois.

Location of holes

The legal location of each hole is given in the conventional manner: section, township, and range; distance from north or south line (in feet); distance from east or west line (in feet); quarter, quarter, quarter. Deviations from this convention might involve a location given as the center of a quarter, quarter, quarter section. In this case, blanks appear in the spaces normally occupied by the number of feet from the north (south) or east (west) lines. Similarly, if the location is at the corner of a quarter section, blanks appear in the footage columns and the corner is designated under the heading "Corner."

File updating

We want to keep this list as complete and accurate as possible. If the reader notices any errors, we would appreciate being notified so corrections can be made. The form at the back of this publication is for this purpose. The Devonian file will be kept current by adding new data as holes are completed, and supplementary lists, which will include both corrections and data on new drilling, will be published periodically.
